Project 01 – From Data to Visuals

FDIT 2230 – Spring 2026

Instructor: Gil Barros
Student: Mohammad Hilal Malik
Student ID: 100472791

Dataset: Workout Training Log (Jan 27–31, 2026)

Research Question

“How does training load and time affect my mood over 5 days?”

Why this dataset works

- Personal but non-private
- Collected over 5 consecutive days
- Contains qualitative + quantitative attributes
- Supports comparisons across days, muscle groups, and mood

Dataset Overview

KEY ATTRIBUTES

- **Record Definition:** One row = one set
- **Quantitative:** Set Volume (kg), Duration (min)
- **Qualitative:** Muscle Group, Mood
- **Total Log:** 5 Days

Date	Muscle Group	Exercise	Set	Reps	Weight (kg)	Set Volume (kg)	Duration (min)	Mood	Energy
2026-01-27	Chest	Bench Press	1	8	40	320	4	Focused	High
2026-01-27	Chest	Bench Press	2	8	40	320	4	Strained	Medium
2026-01-27	Chest	Bench Press	3	6	37.5	225	4	Fatigued	Medium
2026-01-27	Chest	Incline DB Press	1	10	17.5	175	3	Pump	High
2026-01-27	Chest	Incline DB Press	2	10	17.5	175	3	Burning	Medium
2026-01-27	Chest	Chest Fly	1	12	45	540	3	Stretch	Medium
2026-01-27	Triceps	Pushdown	1	12	30	360	3	Controlled	Medium
2026-01-27	Triceps	Pushdown	2	12	30	360	3	Burning	Low
2026-01-27	Triceps	Overhead Ext	1	10	12.5	125	3	Tired	Low
					270	2600	30		
2026-01-28	Back	Deadlift	1	5	70	350	4	Strong	High
2026-01-28	Back	Deadlift	2	5	70	350	4	Heavy	Medium
2026-01-28	Back	Lat Pulldown	1	10	50	500	3	Smooth	Medium
2026-01-28	Back	Seated Row	1	10	45	450	3	Engaged	Medium
2026-01-28	Back	Face Pull	1	12	25	300	3	Light	Medium
2026-01-28	Biceps	Barbell Curl	1	10	25	250	3	Pump	Medium
2026-01-28	Biceps	Barbell Curl	2	8	22.5	180	3	Burn	Low
2026-01-28	Biceps	Hammer Curl	1	12	10	120	3	Tired	Low
					317.5	2500	26		
2026-01-29	Legs	Squats	1	6	60	360	4	Focused	High
2026-01-29	Legs	Squats	2	6	60	360	4	Heavy	Medium
2026-01-29	Legs	Leg Press	1	10	120	1200	3	Burning	Low
2026-01-29	Legs	Leg Curl	1	12	40	480	3	Tight	Low
2026-01-29	Legs	Calf Raise	1	15	30	450	3	Sore	Low
2026-01-29	Abs	Plank	1	45	0	0	2	Shaky	Low
2026-01-29	Abs	Hanging Leg Raise	1	10	0	0	3	Hard	Low
2026-01-29	Abs	Cable Crunch	1	15	35	525	3	Burn	Low
					345	3375	25		
2026-01-30	Shoulders	Overhead Press	1	8	30	240	3	Controlled	Medium
2026-01-30	Shoulders	Overhead Press	2	8	30	240	3	Burn	Medium
2026-01-30	Shoulders	Lateral Raise	1	12	7.5	90	2	Pump	Medium
2026-01-30	Shoulders	Rear Delt Fly	1	12	6	72	2	Stable	Medium
2026-01-30	Shoulders	Upright Row	1	10	25	250	3	Heavy	Low
2026-01-30	Arms	EZ Curl	1	10	25	250	3	Pump	Medium
2026-01-30	Arms	Tricep Dip	1	12	0	0	3	Burn	Low
2026-01-30	Arms	Cable Curl	1	12	30	360	3	Tired	Low
					153.5	1502	22		
2026-01-31	Full Body	Romanian Deadlift	1	8	60	480	4	Smooth	Medium
2026-01-31	Full Body	Goblet Squat	1	12	25	300	3	Easy	Medium
2026-01-31	Full Body	Pushups	1	15	0	0	3	Tired	Low
2026-01-31	Full Body	Lat Pulldown	1	12	45	540	3	Light	Medium
2026-01-31	Full Body	Shoulder Press DB	1	10	15	150	3	Okay	Medium
2026-01-31	Full Body	Plank	1	40	0	0	2	Shaky	Low
					145	1470	18		

Mood Categories (Data Dictionary)

Positive: Pump, Focused, Smooth, Engaged

Neutral: Controlled, Light, Stable, Okay

Strained: Heavy, Burning, Tight

Fatigued: Tired, Shaky, Sore, Fatigued

Note: *Categorizing granular mood descriptors into broader "sentiment" buckets allows for cleaner visual patterns and more meaningful analysis of training impact.*

Chart 1 — Mood Ribbon Timeline

WHAT THE CHART SHOWS

Each day is a single "tile" colored by my dominant mood category, while the tile height represents total training volume (kg). Labels add daily volume and workout duration, letting me read the week like a mood "barcode."

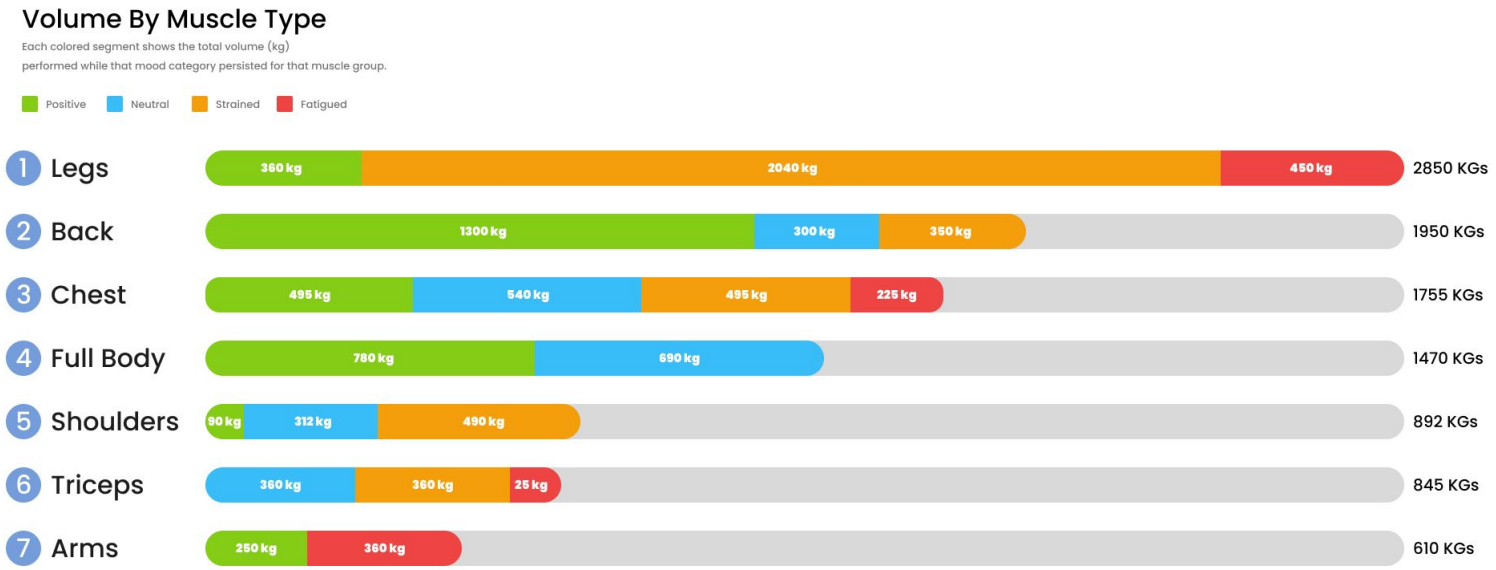

WHY IT REVEALS SOMETHING INTERESTING

My highest-load day (Jan 29: 3,375 kg, 25 min) aligns with Strained, while my lowest-load days (Jan 30–31: ~1,502 kg and ~1,470 kg) align with Neutral. After the peak load, my mood shifts into a Neutral streak, suggesting recovery or reduced intensity.

STORY/INSIGHT IT COMMUNICATES

Over 5 days, training load appears to drive my mood more than time: big volume spikes correlate with strain, while reduced volume correlates with more manageable moods.

Chart 2 — Volume by Muscle Type

WHAT THE CHART SHOWS

My total training volume is grouped by muscle type, and each muscle bar is segmented by mood category. This shows where my volume comes from and what mood it tends to produce.

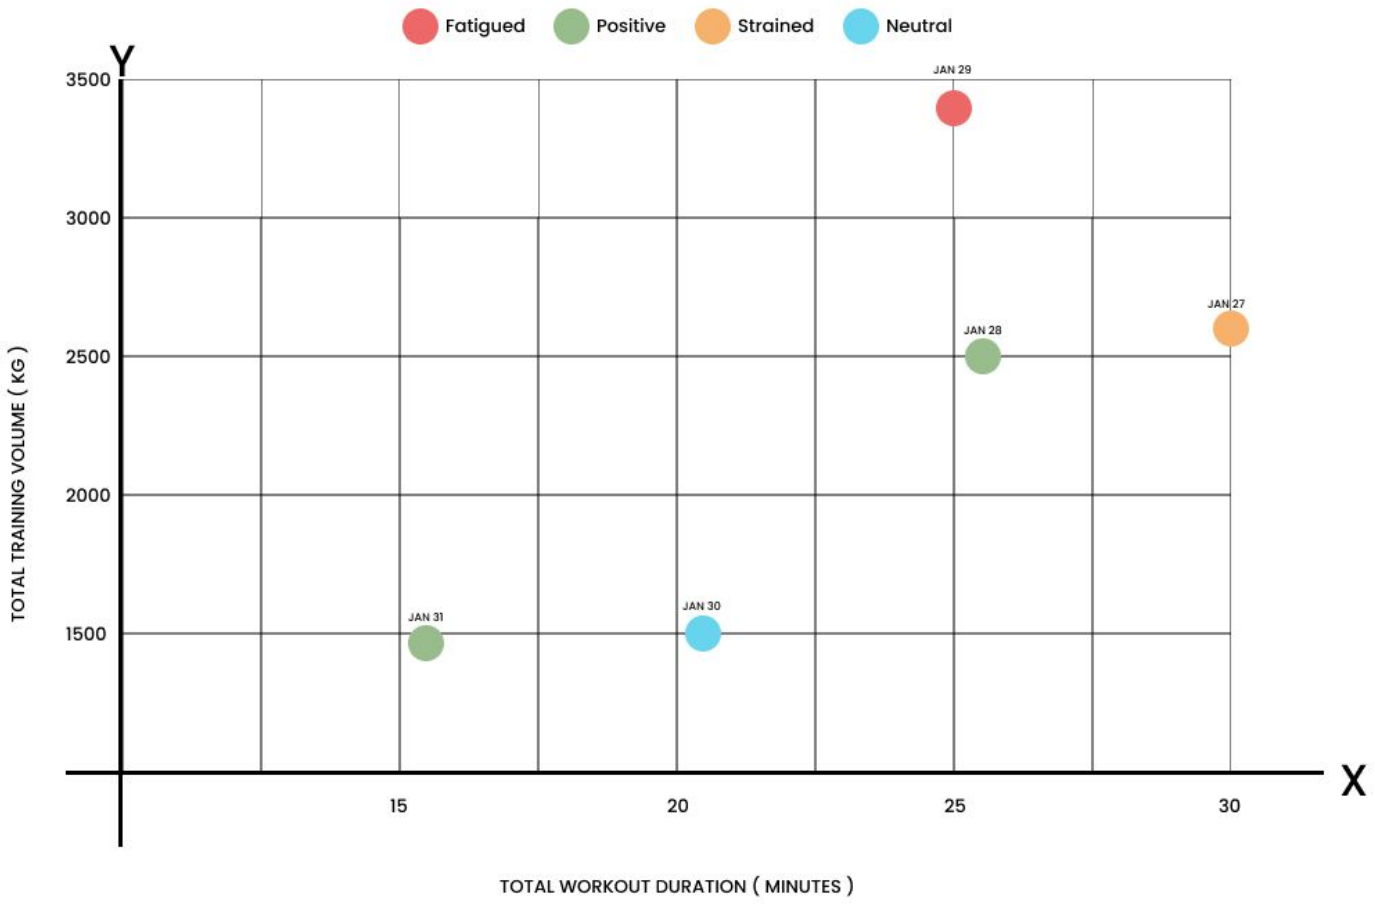

WHY IT REVEALS SOMETHING INTERESTING

My legs have the highest volume (~2,850 kg) and are dominated by Strained + Fatigued segments, while my Back is high volume (~1,950 kg) but mostly Positive. So, equal "load" doesn't feel equal—muscle group changes the mood outcome.

STORY/INSIGHT IT COMMUNICATES

My mood response isn't just about total work; it's about which muscles carry the work. My leg volume is my main driver of strain, while Back volume looks more sustainable and confidence-building.

Chart 3 — Duration vs Total Training Volume

WHAT THE CHART SHOWS

Each dot is a workout day plotted by duration (min) on the x-axis and total training volume (kg) on the y-axis, colored by my dominant mood category.

WHY IT REVEALS SOMETHING INTERESTING

Higher volume doesn't require longer sessions: Jan 29 produces the most volume (~3,375 kg) in ~25 minutes, while Jan 27 lasts longer (~30 min) with less volume (~2,600 kg). Mood shifts track the high-volume region: the peak dot is Strained, while lower-volume days cluster as Neutral/Positive.

STORY/INSIGHT IT COMMUNICATES

In my 5-day log, intensity (volume) is the stronger mood trigger than time. Short, heavy sessions tend to push mood toward strain; shorter, lighter sessions maintain neutral stability.

Conclusion (Answer to the Research Question)

- **Load vs. Mood:** High volume consistently correlates with Strained/Fatigued states.
- **Time vs. Mood:** Duration has a weak correlation; shorter, intense sessions caused more strain than longer, lighter ones.
- **Muscle Impact:** Leg training is the primary source of negative mood states (Strain), while Back training supports Positive states.
- **Takeaway:** To manage mood, leg volume should be distributed more evenly, rather than spiked in a single high-intensity session.
